

International Remote Production

Telstra Broadcast Services

Live content delivered to production hubs via a low-latency global network

Interest in remote production is becoming steadily more widespread. Broadcasters are finding significant business benefits, greater efficiencies and reduced carbon footprint by keeping production to a centralised location. Telstra has the international network and technology to deliver content from source to destination for live production. Powered by our Optical Transport Network, a fibre optics-based multiplexer for voice, data, video and LAN applications, that delivers broadcast quality content across with world.

High speed transport for high density remote production

Scalable bandwidth at speed

Ability to scale our network to cater for increasing service bandwidth and line requirements with services ranging from 10 Mbps to 100 Mbps, 10 Gbps to 40 Gbps, and 10Gbps to 200Gbps

High-quality network delivery

We have confidence in our network to deliver content with low delay, low jitter and low render

Simplification and aggregation of multiple tech

Technologies such as Ethernet, SDH, Fibre Channel, and formats such as DVB ASI and HDSDI can be transported over the same wavelength whilst retaining their inherent technology characteristics

Compression options

Capable of both compressed and mezzanine style compression using light or low compression to meet business requirements, such as TIny COdec (TICO), Uncompressed, and VC-2 Compression

Solutions

Reduced business and the environmental impacts

Deliver multiple outputs for same cost

Access to all camera in production hub multiple channels or feeds can be delivered without further infrastructure.

Capex reduction

Removes the cost for onsite production facilities and increases productivity by enabling personnel to work on multiple events in a centralised location.

Reduced environmental impact

Reduction of fossil fuels by minimising travel of staff and equipment to event sites.
